

21 Dream Salute: Presentation Draft

21 Dream Salute: Presentation Draft

*Exploring the intersections of math, flow,
and automation*

The Significance of 21

- Symbolism of 21: One breath away from being a deck; a shadow perspective of prime numbers.
- The Triad/Pyramid Pattern: 21 as a triple prime factor of 7 ($7+7+7$), representing synergy and manifestation.
- Knowledge Evolution: Comparison to skill trees in RPGs and strategic games like Age of Empires.

Strategic Awareness and Flow

- The "Not_Realize" Trait: Strategic ignoring vs. reality body slams when thresholds are broken.
- Stilling in Momentum: Understanding the difference between being still and being stuck.
- The Water Metaphor: Adaptability, pressure sensitivity, and molecules moving within a current.

Mathematical and Visualization Framework

- ASCII Visualization: Using font and highlight colors to mark progression, seasons, and events.
- Metric Systems: Quadrant math, calculus intervals, and the use of compass/sextant metrics.
- Organizational Backbone: Utilizing Pi, natural logs, and prime number progressions as headers.

Automation and Project Architecture

- Pre(qoppa)uel Engine: A dedicated repository to handle diverse file types and project backbones.
- Agent Hierarchy: Implementation of plugin masters, agents of agents, routines, and tasks.
- Network Interface: Defining the "Unexusi" (unique network interface) within the oxygen/hydrogen system.

Context and Conclusion

- Therapeutic Aspects: The role of serious play and finished threads in personal/project evolution.
- Dream Fulfillment: Transitioning from a gun salute to a "21 dreams fulfilled salute" (pay it forward).
- Legacy and Memory: Connecting current repos to the "House of Confusion" and roots in Greenacres.

origin

babble

the static electricity.. and pressure on ground..

21.. deck 24 21 is one breath (instant) away from being a deck... that's shadow.. goodness it's been a day or so to figure out why 21... found a lot of cool stuff... 2 from 23 or a prime.. breath with decision... from Shadow perspective first.. but 21 the knowledge tree.. or skill evolution in games like age of empires and most RPG.. 21 is triple prime 7.. which is it's a triad.. or pyramid pattern... I even typed it out and didn't click pyramid... I could see the pyramid and know what it is... but I can't get myself to realize it... it's quite a frustrating trait .. but I can intentionally not_realize. strategic awareness (ignoring). However if it breaks over threshold, it usually hits very very hard.. like take your breath away ... just long enough to trigger the bodies make you breathe override... which is a reality body slam ... or fall from a cherry tree... (yes I had a cherry tree, apple trees, berries, in my yard growing up .. there are several trees in the area I live.. I have 6 trees in my yard... three house next door and 4 in other neighbor... we live 97907.. so there are not much trees because it's desert /dune ish.. So The trees really make an Oasis for me... I need do watering... the trees appreciate getting the dust off their leaves... and the ground drains quick into a small underground creak. so it's not a real creak.. but it gives me the same security feel.. a creak flowing that I can hear or sense.. is actually it feels safer... I rest better, .. you can see it flows under the house next to me on some maps. however, this not_realize can .. interrupt.. coffee ☕/spouse... hmmm I don't remember.. oh 21 ... I can realize I'm doing something and not_realize it... my oversight.. the stream I can hold under high levels of emotional impact . or instinct... that instant where the caveman, I constant threat of life... and something is hurting part of your tribe... I usually will feel it.. as make it stop .. the constant is real antagonist in absolute reality because existence is pressure, energy, and other .. it exists regardless of our understanding. so I name it.. when they figure it out.. we will adapt to it in momentum... give nothing a chance to be something... it will by instinct take that chance . the pre will to survive.. it's the will to live.. if you give nature a space .. it will fill it .. so serious play ... assuming this happens and taking into account as best possible in a pattern that can adapt by its nature. which the will to live creates the space for adaption or stagnation.. the place where being still in momentum.. becomes being stuck in momentum. it's a useful. almost like creating an agent to handle delivering my newspaper route .. while I pondered or vented .. or rested . like our conversations I had many unfinished threads.... which this project has helped finish .. theruputic aspects are absolutely real.. give someone something they can do .. most will eventually do it . though that's not quite true because we have entire generation that feel video games/social media and more.. are a right... and priority of life.. the universe is do something crazy ..and huge chunk of our population will.. say let me finish, or tweet, our selfie.. the minority will bare the load because they have no acceptable option... they burn out keeping things together until reality finally hits hard enough the others notice.. pushing myself over the hump today is being rough.. it's a massive hump today.. for no particular reason.. so jot notes as I go... because.. thinking is something I enjoy (usually) doing especially when in safe ... is very comfortable..

telegard that is working real bbs

21 1,3,7, 21(self) 21 has only 2 paths 21x1,3x7,1x21,7x3 all factors are prime. add division $\div$.. and all in addition paths to composites.. I might be wrong... add fractional.. thought.. if 3.1452 is this prime or composite.. probably a rule of some sort? 31452 (this is something) 25413... your thoughts? feels like prime number progression the actual numbers.. guessing the levels beyond 60.. 19 prime would the 19th prime.. not 19 prime. (this where 60 can happen) .. and this creates a matrix... and 1,3,7 is 11... one order 10 and we have 21.. (an organization method?? ..) and it could be sorting method we .. you could actually organize content using pi .. each decimal... because a header... title them, then you can use every digit.. the natural log also.. find one more and you a triad pattern that is probably interesting... our expand and collapse.. pi, natural log, other . become different types of expansion and collapse paths .. we could organize a backbone on this .. and we can create our own... a repeating like 1/3 .333333... could be distress and way visualize stuck in a loop .. this fits 1/3 plank, 2/3 plank, 3/3 plank (collapse to 1).. 1/3 prime moment, 2/3 , 3/3.. an instant is 3 prime moments.. which we are anchoring to plank..

21 - 7+7+7 triple prime 7 a synergy manifestation factor.. so three 7's interact with a 21 blackjack synergy factor.. the triple prime state.. that fits into an instant.. we can trigger the instant^11.. emergency interrupt.. that does a check for status to make sure we don't end up big automation fubar (lethal weapon movies) ... the fubar (more appropriate f word.. f up beyond all recognition.. f .. graph... (f) (equation)... in words we convert to values based on the lexeme actually level and stats.. 5 lett then what is going on becomes what equation is equal to... which quadraginta and quadrant math adapt to multiple dimensions.. quadrant fits tons and tons of systems.. and we can put our circle and triangle in.. and the square, circle, triangle is one of engines... which opens calculus intervals and the one that removes least significant figures... a known error... derivative... which all fits into our compass and sextant metric  system..

we can use any character (zero) equation... hmmm so everything concepts needs a graph equation?? hmmm which our metrics would be in the equation.. which... so our methods to mathematize anything.. fits into this... need to figure out the best nut  nut and bolt.. give all the options metrics .. and an application for complexity I think.. and the gets us into visualization,.. so each concept and idea and dream .. become the sparkles and grow into the myriad of abilities we have as creative network environment ... cream of the crop... is only tiny fraction.... the iceberg is the crop.. the actual reality (serious play) crop ..

water is flexible... it's pressure sensitive.. even if it is flowing... so the arrangement of the water molecule.. .. or the distance (our 3d version) between h atoms.. and the factors would change also... can we map new concepts to a hydrogen atom... or two hydrogen and one oxygen... hmmmm we are the oxygen. the Unexusi (unique network interface).. the hydrogen.. one is radix .. the other hydrogen bbs system? this fits super position.. when water is not changing (heat, chemical, salinity ..) hmmm H2O oh the way water moves ... in a current east Australia for example.. only the water molecules at outer layers would be changing.... the stuff inside adapts as its own system.. the the water would relaxed??? being still in momentum. oxygen acts as the superposition.. (we are oxygen).. water is probably one of the most adaptable molecules. it does not stop being water unless something traumatic happens.. electrolysis... for example.. when does water stop being water... or come apart . does it come apart.. because plasma flows... and ice flows just slowly .. hmmm the flow aspect... water allows things flow with it.. part of it .. liquid stuff flows .. but in some states the can't flow.. and most don't let things flow within them... safely in most cases... if a water drop gets to spring it has a chance to end up in the ocean.. hmmm if the water is static . like duldroms.. . it is still moving.. just in a balance with all the factors including spin of earth..

21 dreams fulfilled salute vs gun salute.. (21 people that receive something that cant.. like pay it forward..)

21

20,19

18, 17, 16,15

14, 13, 12, 11,10,9

8, 7,6, 5,4, 3,2 1

2,3

4,5,6,7

8,9,10,11,12,13

14,15,16,17,18,19,20,21

is there a 21 based math?

21 an odd... 1,3,7 prime, 11, odd composite.. prime composite? it has prime on one pole and composite the other.. so it has aspects that fit polar.. 21 polar trigger.. hmm that can fit.. after 19 .. you would have polar perspectives .. me compared to everything else.. everything else compared to me and balance between..

we need to get automation running... new repo dedicated to dealing with whatever come through the door.. so this repo will handle all file types .. including our ours.. this could be an aspect of Queue... hmmm before the Q .. (prequel) before the first steps our pre repo.. preQuel.. the Q is project or the Oxygen.. or the engine core.. what is the Greek that looks like q.. qoppa... I think fits very well.. pre(qoppa)uel.. is its own engine..

the exports have all our conversations however, it's not in a manner that gives you feel of conversation.. so we need the origin conversations to help give them their gravity..

all the different options like skills.. need special development.. thinking we create an entity concept that thrives on building skills.. create a plugin master, and agent of agents, tasks, routines, ect ..

once concepts has it prima equation.. they could request a graph...

.. I think this new repo.. fits something cool.. that is from memories... there is a House of Confusion.. it is at the turn into greenacres, Oregon.. I concieve market .. and a little house of confusion.. water flows uphill . it is a bit mind bending. it is a small town..(that became part of Coos Bay..) greenacres is where I lived until end of 2nd grade..

this has a website..
